

Benjamin Brkić, Full Stack Developer

benjamin@benjaminbrkic.com – +387 60 328 7245 – Maglaj, Bosnia and Herzegovina

Summary

Full-stack developer building modern TypeScript and React frontends (Next.js, TanStack Start, Astro) on top of real-time and event-driven backends (Convex, Java, Spring Boot). Recent work spans SaaS platforms, hotel management systems with payment and device integrations, cross-platform mobile apps, and AI-assisted development workflows.

Work experience

Software Developer, Sportradar Jan. 2026 - Present

- Continuing in the same engineering team following NSoft's rebrand to Sportradar.
- Building payment-provider integrations and real-time, event-driven services (Kafka, RabbitMQ, WebSockets) across iGaming and platform features.
- Using AI-assisted engineering workflows (Codex and coding agents) to speed up analysis, refactoring and delivery.

Software Developer, NSoft Apr. 2022 - Jan. 2026

- Developed and maintained scalable backend systems using Java and Spring Boot, focusing on clean code and robust architecture.
- Managed databases with MariaDB and Percona MySQL, optimizing performance and ensuring high availability and security.
- Implemented messaging solutions with Kafka and RabbitMQ to facilitate reliable data flow and system integration.
- Delivered projects on time by leveraging CI/CD pipelines (Jenkins, Kubernetes) in a collaborative team environment aided by project management tools.
- Consistently enhanced technical skills by pursuing professional development in emerging technologies and software Design Patterns and Principles - SOLID, DRY, KISS, CQRS etc.

Organizer, IT Challenge 2018 - Present

- Help organize IT Challenge, one of the largest IT competitions for young developers and informatics students in Bosnia and Herzegovina, gathering hundreds of participants each year and promoting software engineering, innovation and education.

Freelance Full Stack Software Developer, Self-employed Jun. 2020 - Present

- Own projects end-to-end — development, product roadmap planning, ops, SEO and maintenance.
- Build ecommerce platforms, booking/reservation systems and custom or open-source CMSs, taking designs from Figma straight to production.
- Gather and prioritize client and stakeholder requests, steering product direction and roadmap to meet real-world demand.

Project: Orgman 2025 - Present

Summary: A growing SaaS platform for organizational management, combining task workflows, department hierarchies, and role-based collaboration in a secure, real-time system.

- Built a Convex/TypeScript backend and React/TanStack Start web application for organization-aware task management — comments, attachments, favorites, subscriptions, statuses, task types and lists.
- Implemented agent-friendly CLI access on top of Clerk authentication, exposing Convex APIs with JSON/Markdown output for terminal and coding-agent workflows.
- Integrated Clerk auth, Cloudflare Workers deployment, TanStack Router/Query/Form/Table, rich text editing, SendGrid, PostHog analytics and test/codegen flows.

Technologies: React, TanStack Start, Convex, PostHog, Clerk, Astro

Project: Hotel President & Spa

2024 - Present

Summary: Complete hotel digitalization platform including room access control, mobile applications, SPA access systems, TV portals, food ordering and streaming integrations.

- Built guest-facing and admin surfaces — rooms, room types, reservations, check-in/check-out, access codes, restaurant menu, offers, newsletters and public/TV/admin endpoints.
- Integrated hotel domain systems including Jantar access control, cash register services and device/controller setup.
- Implemented Monri payment flows with payment-URL generation, webhook/status handling and reservation payment state.

Technologies: .NET, ASP.NET Core, React, React Native

Project: Hotel Story Automation

2025 - Present

Summary: Custom hotel software solution with digital TV portals, access control systems, mobile applications and hotel service management.

- Delivered a second hotel deployment on the same integration-oriented architecture, covering room operations, guest workflows, access codes and TV/admin endpoints.
- Wired up device/controller setup, cash register services and Monri payment flows with webhook and reservation payment-state handling.
- Built the mobile app and digital TV portal surfaces for in-room services and hotel management.

Technologies: .NET, ASP.NET Core, React, React Native

Project: ERP Suite Modernization

Ongoing

Summary: Porting a mature, full-suite ERP system — developed and refined over 20+ years — from a legacy stack to a modern, local-first architecture.

- Re-architecting decades of business domain logic into a modern React / TanStack Start application, migrating incrementally to preserve existing workflows.
- Implementing local-first capabilities with ElectricSQL and CRDT-based sync for offline-capable, conflict-free real-time collaboration.
- Building the backend on Node.js with Drizzle ORM over PostgreSQL, modeling the existing data and processes for a staged migration.

Technologies: React, TanStack Start, ElectricSQL, CRDT, Node.js, Drizzle, PostgreSQL

Project: Cjenogram

2025 - Present

Summary: A cross-platform grocery price comparison platform developed in collaboration with the Chamber of Economy of Zenica-Doboj Canton, enabling users to scan products, compare prices across stores, and manage shopping lists.

- Built a pnpm/Turbo monorepo with a mobile-first app structure, Convex backend and shared web/CMS surfaces.
- Implemented product scanning, cross-store price comparison and shopping-list management with real-time data.
- Set up backend type checks, Convex tests and an explicit backend deployment workflow.

Technologies: React, Astro, React Native, Convex

Project: Winpoint

2022 - 2023

Summary: A predictions platform for esports targeting CS:GO, where players predict match outcomes and earn rewards.

Technologies: React, Next.js

Project: ProFarm

2024 - 2025

Summary: Developed a custom-tailored ecommerce experience tightly integrated with a rich CMS for ProFarm Pharmacy.

Technologies: Next.js (SSR, SSG, ISR, Server Actions, Form Validation, Zod, Next Auth, Metadata for SEO), WordPress (Headless), TypeScript, GraphQL (Apollo), Tailwind, State Management with Zustand, ACF with WordPress, Let's Encrypt for SSLs, Vercel

Project: Youth Association “Dictum Factum” Maglaj 2023 - Present

Summary: Enabled the team at the association to use a self-hosted instance of PayloadCMS for content management paired with a Next.js frontend to showcase their work.

Technologies: Monorepo with Turbopack, Next.js (SSR, SSG, auto Light/Dark mode, Shadcn components, Internationalization with next-intl, Metadata for SEO), VPS on the backend (PayloadCMS, User management, Content management, dynamic blocks, Internationalization for content)

Project: Smart Locker System 2026

Summary: A smart locker management system handling secure access, reservations and real-time locker status monitoring.

Technologies: Python, React, Node.js

Project: AI Log Detection System 2026

Summary: An AI-powered system for automated log analysis and anomaly detection, surfacing issues from large volumes of system logs in real time.

Technologies: Python, React, Node.js

Project: Chemical Warehouse Management System 2025

Summary: A software solution for chemical warehouse management and inventory tracking — monitoring chemicals stored in barrels, managing stock, and sending automated alerts for expired or soon-to-expire chemicals, with reporting and warehouse analytics.

Technologies: Python, React, Node.js

More examples of previous work with clients can be seen on my website: <https://www.benjaminbrkic.com>

Education

Faculty of Information Technology, University “Džemal Bijedić” in Mostar Sep. 2022 - Present
Software Development Student

Gymnasium “Edhem Mulabdić” Maglaj Sep. 2017 - May 2021
Information-communication studies

- Valedictorian
- Regional/Country Spelling Bee winner
- Regional School Handball championship winner

Skills & Interests

Skills

JavaScript, TypeScript, React, Next.js, TanStack Start, Astro, React Native, Node.js, Convex, TailwindCSS, Clerk, PostHog, Docker, NGINX, SQL, NoSQL, CMS, Git, Java, Spring Boot, Kafka, RabbitMQ, WebSockets, AI-assisted / agentic development (Codex, coding agents), Chrome Extensions

Interests

Technology, Fitness, Gym, Handball, Basketball, Gaming, Reading & books (sci-fi / cyberpunk), Music, Movies, Cars
